QUANTUM MECHANICS

by

Itzhak Bars

Contents

1 Early and Modern QM **9**

1.1 Origins of Quantum Mechanics 9

1.1.1 Black body radiation 9

1.1.2 Photoelectric effect 11

1.1.3 Compton effect 12

1.1.4 Particle-wave duality 13

1.1.5 Bohr atom 14

1.1.6 Fundamental principles of QM 17

1.2 QM from one angstrom to the Planck scale 18

1.3 Problems 22

1.4 Answers to problems in ch.1 26

2 FROM CM TO QM **33**

2.1 Classical dynamics 34

2.2 Quantum Dynamics 36

2.2.1 One particle Hilbert Space 38

2.2.2 Quantum rules 41

2.2.3 Computation of $\langle p|x\rangle$ 42

2.2.4 Translations in space and time 43

2.2.5 Computation of time evolution 45

2.2.6 Wave Packets 47

2.2.7 Understanding $\Delta x\, \Delta p \geq \hbar/2$ through gedanken experiments 50

2.3 Problems 53

2.4 Answers to problems in Chapter 2 57

3 STRUCTURE OF QM **67**

3.1 Postulates 67

3.2 States, kets & bras, norm 68

3.3 Observables, eigenstates, eigenvalues 70

3.4 Compatible and incompatible observables 73

3.4.1 Compatible observables and complete vector space 73

3.4.2 Incompatible observables. 74

3.5 Measurement 75

3.5.1 Projection operators 75

3.6 Uncertainty relations . . . 78
3.7 General solution to a QM problem . . . 79
3.7.1 Time translations . . . 79
3.7.2 Complete solution . . . 82
3.8 Matrix QM with 2 states . . . 88
3.9 Quantum Mechanical puzzles and answers . . . 92
3.9.1 Schrödinger's cat . . . 92
3.9.2 Einstein-Rosen-Podolsky paradox . . . 92
3.9.3 Measuring the phase of the wavefunction . . . 92
3.9.4 Quantum Mechanics for the entire universe . . . 92
3.10 PROBLEMS . . . 93
3.11 Answers to problems in Chapter 3 . . . 96

4 INTERACTIONS 115
4.1 The framework . . . 115
4.1.1 Conservation of probability . . . 117
4.2 Particle in a potential in 1 dimension . . . 119
4.2.1 Piecewise continuous potentials . . . 121
4.2.2 Harmonic Oscillator in 1d . . . 136
4.3 Electron moving in a periodic crystal . . . 139
4.4 Problems . . . 145
4.5 Answers to Problems in Chapter 4 . . . 148

5 OPERATOR METHODS 161
5.1 Harmonic oscillator in 1 dimension . . . 161
5.2 Coherent States . . . 166
5.3 Normal ordering . . . 168
5.3.1 Wick's theorem . . . 169
5.4 Harmonic oscillator in 2 and d dimensions . . . 170
5.5 Fermionic oscillators . . . 174
5.6 Quadratic interactions for N particles . . . 175
5.7 An infinite number of particles as a string . . . 180
5.8 Problems . . . 186
5.9 Answers to problems in Chapter 5 . . . 191

6 CENTRAL FORCE PROBLEM 201
6.1 Separation of center of mass . . . 202
6.2 Angular momentum commutators . . . 204
6.3 Radial and angular operators . . . 207
6.3.1 Radial operators . . . 207
6.4 General properties of angular momentum . . . 210
6.5 Hilbert space for angular momentum . . . 213
6.6 Spherical harmonics . . . 215
6.6.1 Tensors and spherical harmonics . . . 220
6.7 Radial & angular equations in d-dims. . . . 221
6.8 Free particle . . . 225

6.9 Harmonic oscillator in 3 dimensions . . . 228
6.9.1 Degeneracy and SU(3) symmetry . . . 231
6.10 Hydrogen atom . . . 234
6.11 Problems . . . 237
6.12 Answers to problems in Chapter 6 . . . 241

7 PROPERTIES OF ROTATIONS 251
7.1 The group of rotations . . . 251
7.2 Representations of angular momentum . . . 255
7.3 Finite rotations and the D^j matrices . . . 260
7.3.1 Relation to spherical harmonics . . . 261
7.4 Computation of the D^j matrices . . . 262
7.4.1 Spin j=1/2 case . . . 262
7.4.2 Spin j=1 case . . . 263
7.4.3 Product of two rotations . . . 264
7.4.4 Euler angles . . . 264
7.4.5 Differential equation for $d^j_{mm'}$ . . . 266
7.4.6 2D harmonic oscillator and SU(2) rotations D^j . . . 268
7.5 Addition of angular momentum . . . 270
7.5.1 Total angular momentum . . . 271
7.5.2 Reduction to irreducible representations . . . 273
7.5.3 Computation of the Clebsch-Gordan coefficients . . . 274
7.6 Wigner's 3j symbols . . . 282
7.7 Integrals involving the $D^j_{mm'}$-functions . . . 283
7.8 Tensor operators . . . 285
7.8.1 Combining tensor operators and states . . . 287
7.9 Problems . . . 290
7.10 Answers to problems in Chapter 7 . . . 296

8 SYMMETRY 327
8.1 Action and equations of motion . . . 327
8.2 Symmetry and Noether's Theorem . . . 329
8.3 Symmetry Generators . . . 333
8.4 Examples of Symmetric Actions . . . 335
8.4.1 Translation symmetry of the free particle . . . 336
8.4.2 Rotation symmetry of the free particle . . . 336
8.4.3 Relative rotations in the central force problem . . . 337
8.4.4 Time translation symmetry . . . 339
8.4.5 Harmonic oscillator in n dimensions and SU(n) . . . 339
8.4.6 Hidden symmetry in the Hydrogen atom and SO($n+1$) . . . 341
8.4.7 Relativistic boost, Lorentz and Poincare symmetries . . . 341
8.5 Symmetry in quantum mechanics . . . 345
8.6 A brief tour of Lie groups . . . 349
8.7 SL(2,R) and its representations . . . 354
8.7.1 A construction . . . 355

8.7.2 Casimir . . . 356
8.7.3 Wavefunction and unitarity . . . 357
8.8 Young Tableaux . . . 359
8.9 PROBLEMS . . . 359
8.10 Answers to problems in Chapter 8 . . . 369

9 SOME APPLICATIONS OF SYMMETRY 387
9.1 H-atom in d-dimensions and SO(d+1) . . . 387
9.2 The symmetry algebra . . . 389
9.3 The dynamical symmetry structure of H-atom . . . 391
9.3.1 2 dimensions . . . 392
9.3.2 3 dimensions . . . 393
9.3.3 d dimensions . . . 395
9.4 Interacting oscillators and dynamical symmetries. . . . 396
9.4.1 SL(2,R) and harmonic oscillator in d-dimensions . . . 397
9.4.2 Interacting Boson Model . . . 398
9.5 Particle in a magnetic field . . . 401
9.5.1 Constant magnetic field . . . 402
9.5.2 Algebraic method . . . 405
9.6 PROBLEMS . . . 409
9.7 Answers to problems . . . 412
9.8 Particle on spherical shell in monopole field . . . 420

10 VARIATIONAL METHOD 421
10.1 Variational theorems . . . 421
10.2 Examples . . . 423
10.3 Helium atom . . . 425
10.4 Identical particles . . . 429
10.5 Helium and the exclusion principle . . . 431
10.6 Multi-electron atoms . . . 434
10.6.1 Hund's rules and their applications . . . 434
10.7 Problems . . . 438
10.8 Answers to problems in Ch.10 . . . 443

11 WKB APPROXIMATION 469
11.1 Semiclassical expansion . . . 469
11.2 Extrapolation through turning points . . . 472
11.3 Applications . . . 476
11.3.1 Bound states . . . 476
11.3.2 Tunneling . . . 481
11.4 Problems . . . 485
11.5 Answers to Problems in Chap.11 . . . 487

12 PERTURBATION THEORY 491
12.1 Diagonalization of H . . . 491
12.2 Two level Hamiltonian . . . 494
12.3 Formal exact solution . . . 495
12.3.1 2-level problem revisited . . . 497
12.4 Perturbative expansion (non-degenerate) . . . 499
12.5 Degenerate perturbation theory . . . 501
12.5.1 More on degeneracy . . . 503
12.6 Fine structure of Hydrogen . . . 505
12.6.1 Relativistic correction . . . 505
12.6.2 Spin-orbit coupling . . . 506
12.6.3 First order perturbation . . . 507
12.7 H-atom in an external magnetic field . . . 511
12.8 H-atom in an external electric field . . . 516
12.9 Problems . . . 518
12.10Solutions to Problems in Ch.12 . . . 521

13 TIME DEPENDENT PROBLEMS 543
13.1 Interaction picture . . . 545
13.2 Dyson series . . . 547
13.2.1 Time dependent perturbation theory . . . 549
13.2.2 Gauge Transformations . . . 550
13.2.3 Summing up the Dyson series . . . 551
13.2.4 Integral equation in the Schrödinger picture . . . 554
13.3 Two level system and Resonance . . . 555
13.3.1 Spin magnetic resonance . . . 558
13.3.2 Maser . . . 560
13.4 Time independent interaction. . . . 561
13.5 Cross section for scattering . . . 563
13.5.1 First order, time dependent perturbation . . . 564
13.5.2 Ionization of a Hydrogen atom by a radiation field . . . 565
13.6 Problems . . . 568
13.7 Solutions to Problems in Ch.13 . . . 570

14 SCATTERING THEORY 581
14.1 Lippmann-Schwinger equation . . . 581
14.2 Scattering amplitude, S-Matrix, T-matrix . . . 583
14.3 Differential and total cross section . . . 585
14.4 Optical theorem . . . 586
14.4.1 Generalized optical theorem . . . 588
14.5 Scattering of identical particles . . . 589
14.6 Born approximation . . . 591
14.6.1 Scattering from the Yukawa Potential . . . 592
14.6.2 Scattering from the Coulomb Potential . . . 595
14.6.3 Validity of the Born approximation . . . 596
14.6.4 Optical theorem and the Born approximation . . . 599

14.7 The eikonal approximation . . . 599
14.8 Partial waves . . . 603
14.8.1 Differential cross section . . . 608
14.8.2 Phase shift $\delta_l(k)$ as a function of l . . . 609
14.8.3 Connection with the eikonal approximation . . . 610
14.8.4 Finite range potential . . . 611
14.8.5 Hard Sphere Scattering . . . 612
14.9 Inelastic scattering . . . 614
14.9.1 Unitarity . . . 614
14.9.2 Black holes . . . 614
14.9.3 Inelastic electron scattering . . . 618
14.10 Analytic properties of the scattering amplitude . . . 619
14.10.1 Jost function . . . 619
14.10.2 Unitarity . . . 619
14.10.3 Bound states . . . 619
14.10.4 Regge poles . . . 619
14.11 Problems . . . 620
14.12 Answers to Problems in Ch.14 . . . 624

15 Feynman's Path integral formalism 655
15.1 basic formalism . . . 655
15.2 Gaussian integration . . . 655
15.3 harmonic oscillator . . . 655
15.4 approximations . . . 655
15.5 examples . . . 655

16 Relativistic Quantum Mechanics 657
16.1 Lorentz transformations and kinematics . . . 657
16.2 Relativistic particle on a worldline . . . 657
16.3 Klein-Gordon equation . . . 657
16.4 positive and negative energies . . . 657
16.5 interacting scalar field, Klein paradox . . . 657
16.6 second quantization of the Klein-Gordon field . . . 657
16.7 Dirac equation, covariance, solutions . . . 657
16.8 second quantization of the Dirac field . . . 657
16.9 spherically symmetric potential . . . 657
16.10 non-relativistic limit . . . 657

17 Radiation field and photons 659
17.1 gauge fixing and classical solutions of the Maxwell field . . . 659
17.2 second quantization of the Maxwell field and photons . . . 659
17.3 interaction of photons with atoms . . . 659
17.4 spontaneous emission and absorbtion . . . 659
17.5 scattering of light . . . 659
