<b>1 Formulation of Symmetry in Physics</b>	<b>5</b>
1.1 Action and equations of motion . . . . .	5
1.2 Symmetry of the action, Noether's theorem . . . . .	6
1.3 Full circle of symmetry and its generators . . . . .	10
<b>2 Examples of particle actions with symmetries</b>	<b>15</b>
2.1 Translation symmetry of the free particle . . . . .	15
2.2 Rotation symmetry of the free particle . . . . .	16
2.3 Relative rotations in the central force problem . . . . .	17
2.4 Time translation symmetry . . . . .	18
2.5 Harmonic oscillator in $n$ dimensions and $SU(n)$ . . . . .	19
2.6 Hidden symmetry in the Hydrogen atom and $SO(n+1)$ . . . . .	20
2.7 Relativistic boost, Lorentz and Poincare symmetries . . . . .	21
<b>3 Examples of global symmetries in field theory</b>	<b>25</b>
3.1 From particle action to field theory via quantization . . . . .	26
3.2 Non-relativistic Schrödinger field . . . . .	27
3.3 Relativistic Klein-Gordon field . . . . .	28
3.4 Noether's theorem in field theory . . . . .	30
3.5 Poincare symmetry in field theory . . . . .	32
3.6 Scale symmetry in Field theory . . . . .	35
3.7 Phase symmetry in field theory . . . . .	36
3.8 $SU(N) \times U(1)$ symmetry in field theory . . . . .	37
<b>4 Introduction to Lie groups and algebras</b>	<b>39</b>
4.1 From symmetry of the action to Lie algebras . . . . .	39
4.2 Closure and structure constants . . . . .	40
4.3 Lie algebras and their classification . . . . .	42
4.4 Lie groups . . . . .	45
4.5 Relation between Lie algebra and Lie group . . . . .	47
<b>5 Smallest representations of classical Lie groups</b>	<b>49</b>
5.1 Group of orthogonal transformations, $SO(n)$ . . . . .	49
5.2 $n \times n$ representation of $SO(n)$ Lie algebra . . . . .	54

5.3	Group of unitary tranformations, $SU(n)$	57
5.4	$n \times n$ representation of $SU(n)$ Lie algebra	59
5.5	Quaternions	62
5.6	Group of symplectic tranformations, $Sp(2n)$	64
5.7	$2n \times 2n$ representation of $Sp(2n)$ Lie algebra	66
5.8	$2n \times 2n$ symmetric matrix generators of $Sp(2n)$	68
<b>6</b>	<b>Exceptional Lie algebras</b>	<b>71</b>
6.1	Octonions	71
6.2	Magic Square	73
6.3	Jordan Algebras	75
6.4	Exceptionals in the Magic Square	77
<b>7</b>	<b>Casimir Invariants and Indices</b>	<b>81</b>
7.1	Adjoint representation	82
7.2	Killing metric, quadratic index	83
7.3	Casimir operators	85
7.4	Eigenvalues of Casimir operators	90
7.5	Classification of representations	92
<b>8</b>	<b>Subgroup and coset structures</b>	<b>95</b>
8.1	Slicing scheme	96
8.2	Product scheme	98
8.3	Subgroup structure of $SU(2n)$	99
8.4	Cosets	99
<b>9</b>	<b>Analytic continuation and noncompact groups</b>	<b>103</b>
9.1	Non-compact groups	103
<b>10</b>	<b>Cartan's Approach to the Classification of Lie Algebras</b>	<b>105</b>
10.1	Semisimple Lie Algebras	105
10.2	Simple Lie Algebras	106
10.2.1	Cartan's approach	106
<b>A</b>	<b>PROPERTIES OF ROTATIONS, <math>SU(2) = SO(3)</math></b>	<b>113</b>
A.1	The group of rotations	113
A.2	Representations of angular momentum	116
A.3	Finite rotations and the $D^j$ matrices	120
A.3.1	Relation to spherical harmonics	121
A.4	Computation of the $D^j$ matrices	122
A.4.1	Spin $j=1/2$ case	123
A.4.2	Spin $j=1$ case	123
A.4.3	Product of two rotations	124
A.4.4	Euler angles	124
A.4.5	Differential equation for $d_{mm'}^j$	126
A.4.6	2D harmonic oscillator and $SU(2)$ rotations $D^j$	128
A.5	Addition of angular momentum	130

A.5.1	Total angular momentum . . . . .	131
A.5.2	Reduction to irreducible representations . . . . .	134
A.5.3	Computation of the Clebsch-Gordan coefficients . . . . .	135
A.6	Wigner's 3j symbols . . . . .	139
A.7	Integrals involving the $D_{mm'}^j$ -functions . . . . .	140
A.8	Tensor operators . . . . .	143
A.8.1	Combining tensor operators and states . . . . .	144
A.9	Problems . . . . .	146
A.10	Answers to problems in Appendix A . . . . .	150
